5.265 minimum_greater_than

DESCRIPTION LINKS GRAPH AUTOMATON

Origin N. Beldiceanu

Constraint minimum_greater_than(VAR1, VAR2, VARIABLES)

Arguments

VAR1	:	dvar
VAR2	:	dvar
VARIABLES	:	collection(var−dvar)

Restrictions

VAR1 > VAR2
|VARIABLES| > 0
required(VARIABLES, var)

Purpose VAR1 is the smallest value strictly greater than VAR2 of the collection of variables VARIABLES: this concretely means that there exists at least one variable of VARIABLES that takes a value strictly greater than VAR2.

Example $(5, 3, \langle 8, 5, 3, 8\rangle)$

The minimum_greater_than constraint holds since value 5 is the smallest value strictly greater than value 3 among values 8, 5, 3 and 8.

Typical

|VARIABLES| > 1
range(VARIABLES.var) > 1

Symmetry Items of VARIABLES are permutable.

Arg. properties

Aggregate: VAR1(min), VAR2(id), VARIABLES(union).

Reformulation Let $V_1, V_2, \ldots, V_{|\text{VARIABLES}|}$ denote the variables of the collection of variables VARIABLES. By creating the extra variables M and $U_1, U_2, \ldots, U_{|\text{VARIABLES}|}$, the minimum_greater_than constraint can be expressed in term of the following constraints:

1. maximum(M, VARIABLES),
2. VAR1 > VAR2,
3. VAR1 $\leq M$,
4. $V_i \leq$ VAR2 $\Rightarrow U_i = M \quad (i \in [1, |\text{VARIABLES}|])$,
5. $V_i >$ VAR2 $\Rightarrow U_i = V_i \quad (i \in [1, |\text{VARIABLES}|])$,
6. minimum(VAR1, $\langle U_1, U_2, \ldots, U_{|\text{VARIABLES}|}\rangle$).

See also

common keyword: next_greater_element *(order constraint)*.

implied by: next_greater_element.

related: next_element *(identify an element in a table)*.

Keywords

characteristic of a constraint: minimum, automaton, automaton without counters, reified automaton constraint, derived collection.

constraint network structure: centered cyclic(2) constraint network(1).

constraint type: order constraint.

Derived Collection	col(ITEM−collection(var−dvar), [item(var − VAR2)])
Arc input(s)	ITEM VARIABLES
Arc generator	*PRODUCT*↦collection(item, variables)
Arc arity	2
Arc constraint(s)	item.var < variables.var
Graph property(ies)	**NARC**> 0
Sets	SUCC ↦ [source, variables]
Constraint(s) on sets	minimum(VAR1, variables)

Graph model Similar to the next_greater_element constraint, except that there is no order on the variables of the collection VARIABLES.

Parts (A) and (B) of Figure 5.584 respectively show the initial and final graph associated with the **Example** slot. Since we use the **NARC** graph property, the arcs of the final graph are stressed in bold. The source and the sinks of the final graph respectively correspond to the variable VAR2 and to the variables of the VARIABLES collection that are strictly greater than VAR2. VAR1 is set to the smallest value of the var attribute of the sinks of the final graph.

Automaton

Figure 5.585 depicts the automaton associated with the `minimum_greater_than` constraint. Let $\texttt{VAR}_i$ be the i^{th} variable of the `VARIABLES` collection. To each triple $(\texttt{VAR1}, \texttt{VAR2}, \texttt{VAR}_i)$ corresponds a signature variable S_i as well as the following signature constraint:

$$((\texttt{VAR}_i < \texttt{VAR1}) \wedge (\texttt{VAR}_i \leq \texttt{VAR2})) \Leftrightarrow S_i = 0 \wedge$$
$$((\texttt{VAR}_i = \texttt{VAR1}) \wedge (\texttt{VAR}_i \leq \texttt{VAR2})) \Leftrightarrow S_i = 1 \wedge$$
$$((\texttt{VAR}_i > \texttt{VAR1}) \wedge (\texttt{VAR}_i \leq \texttt{VAR2})) \Leftrightarrow S_i = 2 \wedge$$
$$((\texttt{VAR}_i < \texttt{VAR1}) \wedge (\texttt{VAR}_i > \texttt{VAR2})) \Leftrightarrow S_i = 3 \wedge$$
$$((\texttt{VAR}_i = \texttt{VAR1}) \wedge (\texttt{VAR}_i > \texttt{VAR2})) \Leftrightarrow S_i = 4 \wedge$$
$$((\texttt{VAR}_i > \texttt{VAR1}) \wedge (\texttt{VAR}_i > \texttt{VAR2})) \Leftrightarrow S_i = 5.$$

The automaton is constructed in order to fulfil the following conditions:

- We look for an item of the `VARIABLES` collection such that $\texttt{var}_i = \texttt{VAR1}$ and $\texttt{var}_i > \texttt{VAR2}$,
- There should not exist any item of the `VARIABLES` collection such that $\texttt{var}_i < \texttt{VAR1}$ and $\texttt{var}_i > \texttt{VAR2}$.
