

**5.177 in**

	DESCRIPTION	LINKS	GRAPH	AUTOMATON
<b>Origin</b>	Domain definition.			
<b>Constraint</b>	<code>in(VAR, VALUES)</code>			
<b>Synonyms</b>	<code>dom</code> , <code>in_set</code> , <code>member</code> .			
<b>Arguments</b>	VAR : <code>dvar</code> VALUES : <code>collection(val-int)</code>			
<b>Restrictions</b>	$ VALUES  > 0$ <code>required(VALUES, val)</code> <code>distinct(VALUES, val)</code>			
<b>Purpose</b>	Enforce the domain variable VAR to take a value within the values described by the VALUES collection.			
<b>Example</b>	<div><code>(3, &lt;1, 3&gt;)</code></div> <p>The <code>in</code> constraint holds since its first argument <code>VAR = 3</code> occurs within the collection of values <code>VALUES = &lt;1, 3&gt;</code>.</p>			
<b>Typical</b>	$ VALUES  > 1$			
<b>Symmetries</b>	<ul style="list-style-type: none"> <li>Items of VALUES are <code>permutable</code>.</li> <li>VAR can be <code>set</code> to any value of <code>VALUES.val</code>.</li> <li>One and the same constant can be <code>added</code> to VAR as well as to the <code>val</code> attribute of all items of VALUES.</li> </ul>			
<b>Arg. properties</b>	<code>Extensible</code> wrt. VALUES.			
<b>Remark</b>	Entailment occurs immediately after posting this constraint.  The <code>in</code> constraint is called <code>dom</code> in <code>Gecode</code> ( <a href="http://www.gecode.org/">http://www.gecode.org/</a> ), and <code>member</code> in <code>MiniZinc</code> ( <a href="http://www.minizinc.org/">http://www.minizinc.org/</a> ). In <code>MiniZinc</code> the <code>val</code> attribute is not necessarily fixed, i.e. it can be a domain variable.			
<b>Systems</b>	<code>member</code> in <code>Choco</code> , <code>rel</code> in <code>Gecode</code> , <code>dom</code> in <code>Gecode</code> , <code>in</code> in <code>JaCoP</code> , <code>member</code> in <code>MiniZinc</code> , <code>in</code> in <code>SICStus</code> , <code>in_set</code> in <code>SICStus</code> .			
<b>Used in</b>	<code>among</code> , <code>cardinality_atmost_partition</code> , <code>group</code> , <code>group_skip_isolated_item</code> , <code>in_same_partition</code> , <code>open_among</code> .			

**See also**

**common keyword:** `domain` (*domain definition*), `in_interval`, `in_same_partition`, `in_set` (*value constraint*).

**implied by:** `maximum`, `minimum`.

**implies:** `between_min_max`.

**negation:** `not_in`.

**Keywords**

**characteristic of a constraint:** `automaton`, `automaton without counters`, `reified automaton constraint`, `derived collection`.

**constraint arguments:** unary constraint.

**constraint network structure:** `centered cyclic(1)` `constraint network(1)`.

**constraint type:** value constraint.

**filtering:** arc-consistency.

**modelling:** `included`, `domain definition`.

Derived Collection	<code>col(VARIABLES-collection(var-dvar),[item(var - VAR)])</code>
Arc input(s)	VARIABLES VALUES
Arc generator	<i>PRODUCT</i> →collection(variables, values)
Arc arity	2
Arc constraint(s)	variables.var = values.val
Graph property(ies)	<i>NARC</i> = 1

**Graph model** Parts (A) and (B) of Figure 5.415 respectively show the initial and final graph associated with the **Example** slot. Since we use the **NARC** graph property, the unique arc of the final graph is stressed in bold.

Figure 5.415: Initial and final graph of the in constraint

**Signature** Since all the val attributes of the VALUES collection are distinct and because of the arc constraint variables.var = values.val the final graph contains at most one arc. Therefore we can rewrite **NARC** = 1 to **NARC** ≥ 1 and simplify NARC to NARC.

**Automaton**

Figure 5.416 depicts the automaton associated with the `in` constraint. Let  $VAL_i$  be the `val` attribute of the  $i^{th}$  item of the `VALUES` collection. To each pair  $(VAR, VAL_i)$  corresponds a 0-1 signature variable  $S_i$  as well as the following signature constraint:  $VAR = VAL_i \Leftrightarrow S_i$ .

Figure 5.416: Automaton of the `in` constraint

Figure 5.417: Hypergraph of the reformulation corresponding to the automaton of the `in` constraint
