

5.214 `k_used_by_modulo`

	DESCRIPTION	LINKS	GRAPH
Origin	Derived from <code>used_by_modulo</code> and from <code>k_used_by</code> .		
Constraint	<code>k_used_by_modulo(SETS, M)</code>		
Type	VARIABLES : <code>collection(var-dvar)</code>		
Arguments	SETS : <code>collection(set - VARIABLES)</code> M : <code>int</code>		
Restrictions	<code>required(VARIABLES, var)</code> <code> VARIABLES ≥ 1</code> <code>required(SETS, set)</code> <code> SETS > 1</code> <code>non_increasing_size(SETS, set)</code> <code>M > 0</code>		
Purpose	Given <code> SETS </code> sets of domain variables, the <code>k_used_by_modulo</code> constraint forces a <code>used_by_modulo</code> constraint between each pair of consecutive sets.		
Example	$(\langle \text{set} - \langle 1, 9, 4, 5, 2, 1 \rangle, \text{set} - \langle 7, 1, 2, 5 \rangle, \text{set} - \langle 1, 1 \rangle \rangle, 3)$		
	The <code>k_used_by_modulo</code> constraint holds since:		
	<ul style="list-style-type: none">• The first collection of variables is assigned 1 value in $\{0, 3, \dots, 3 \cdot k\}$, 3 values in $\{1, 4, \dots, 1 + 3 \cdot k\}$ and 2 values in $\{2, 5, \dots, 2 + 3 \cdot k\}$, while the second collection of variables is assigned no more values in the previous three sets of values.• The second collection of variables is assigned 2 values in $\{0, 3, \dots, 3 \cdot k\}$ and 2 values in $\{2, 5, \dots, 2 + 3 \cdot k\}$, while the third collection of variables is assigned no more values in the previous three sets of values.		
Typical	<code> VARIABLES > 1</code> <code>M > 1</code>		
Symmetries	<ul style="list-style-type: none">• Items of SETS are <code>permutable</code>.• Items of SETS.set are <code>permutable</code>.• An occurrence of a value <i>u</i> of SETS.set.var can be <code>replaced</code> by any other value <i>v</i> such that <i>v</i> is congruent to <i>u</i> modulo M.		
Arg. properties	<code>Contractible</code> wrt. SETS.		

See also

common keyword: `k_used_by` (*system of constraints*).

implied by: `k_same_modulo`.

part of system of constraints: `used_by_modulo`.

used in graph description: `used_by_modulo`.

Keywords

characteristic of a constraint: `modulo`, sort based reformulation.

constraint type: `system of constraints`, `decomposition`.

modelling: `inclusion`.

Arc input(s)	SETS
Arc generator	$\text{PATH} \mapsto \text{collection}(\text{set1}, \text{set2})$
Arc arity	2
Arc constraint(s)	$\text{used_by_modulo}(\text{set1.set}, \text{set2.set}, M)$
Graph property(ies)	$\text{NARC} = \text{SETS} - 1$

Graph model Parts (A) and (B) of Figure 5.486 respectively show the initial and final graph associated with the **Example** slot. To each vertex corresponds a collection of variables, while to each arc corresponds a used_by_modulo constraint.

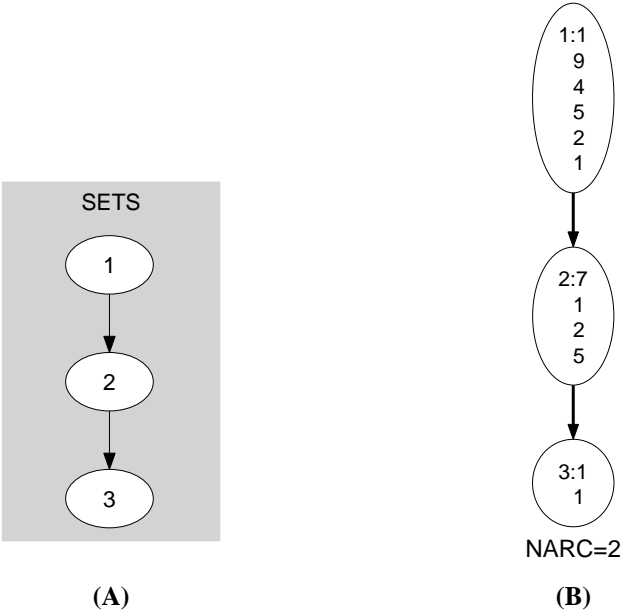

Figure 5.486: Initial and final graph of the $k_used_by_modulo$ constraint
