2060 PREDEFINED

## 5.342 same\_sign

## **DESCRIPTION** LINKS

Origin Arithmetic.

 ${\bf Constraint} \hspace{1.5cm} {\tt same\_sign}({\tt VAR1}, {\tt VAR2})$ 

Arguments VAR1 : dvar VAR2 : dvar

Restriction

Purpose Enforce the fact that the product of the first and second variables is greater than or equal

to 0.

Example (7,1)

The same\_sign constraint holds since 7 and 1 have the same sign.

Typical  $VAR1 \neq 0$ 

 $\mathtt{VAR2} \neq 0$ 

**Symmetry** Arguments are permutable w.r.t. permutation (VAR1, VAR2).

See also comparison swapped: opposite\_sign.

implied by: divisible\_or, eq, sign\_of.

Keywords constraint arguments: binary constraint.

constraint type: predefined constraint, arithmetic constraint.

filtering: arc-consistency.
